

EV424 — Official Identity (One Page)

Version: v2025-11-24 (88 phases correction applied)

EV424 is not a prediction system.

EV424 is an evidence-first verification engine: it records what happened, proves it, and makes it reproducible.

Core Principle

Accuracy(4)=Truth(2)=Life(4)

Definition

Evidence-first: no action without grounds.

Deterministic: the same input produces the same output.

Verifiable: every claim is backed by reproducible checks (e.g., SHA-256 verification).

Minimal exposure: publish only what is necessary for independent public verification.

What EV424 Does

Converts raw artifacts (logs, documents, outputs) into verifiable evidence.

Closes each record with integrity checks and re-verification (closure).

Enables independent confirmation without trusting the operator.

What EV424 Does Not Do

No forecasts, no persuasion, no hidden assumptions.

No performance claims without evidence.

No alteration or overwrite of closed records.

EV424 exists to keep verification stable under disputes, audits, and time.

Accuracy(4)=Truth(2)=Life(4)
