EV424 — Product Summary (1-Page)

Version / Date (KST): v2026-01-18 / 2026-01-18

Entity Name: Wonseo Lee (pre-incorporation)

Purpose (Validation-Only)

This document is provided solely for validation interest. Legal, ownership, and due-diligence matters are handled separately. No commercial obligation is implied.

Definition (FACT)

EV424 is an Evidence Engine that seals quantitative system outputs into reproducible, integrity-verifiable evidence. (Integrity-first · Verifiable · No fabrication)

Problem Context (FACT)

Many analytics systems cannot be independently verified or reliably reproduced due to contamination between working results and missing integrity gates. EV424 enforces evidence sealing and reproducibility as non-optional system constraints.

Verified Scope (FACT)

Within an explicitly referenced sealed evidence bundle (SHA-256 gated), EV424 verifies:
• sealed evidence bundles • reproducible metrics derived only from sealed grounds • verifiable event-to-log matching
All facts are valid only within the referenced sealed scope.

Core Deliverables (FACT)

Sealed Evidence Bundle · Reproducible Metrics Extract · Verifiable Event↔Log Match

Validation Method (FACT)

Time-keyed event matching followed by value-equality checks between sealed outcomes and source logs. Results are binary and reproducible under identical input scope.

First Product (Chosen Scope)

Option B — Verification Layer (API / SDK)

Customer: data / analytics / validation teams

Deliverable: evidence sealing · integrity gate · reproducibility layer

Pricing: usage-based + enterprise license (no pricing disclosed)

Rationale: minimizes operational dependency while enabling validation without system replacement or performance claims.

Why It Matters (FACT)

EV424 does not claim performance or outcomes. It verifies whether a system can produce sealed, reproducible evidence under strict integrity constraints. Working outputs are intentionally separated from sealed grounds to reduce contamination and audit risk.

Disclosure / Legal Safety (FACT)

Implementation details are withheld. Validation may be demonstrated via a same-input→same-output reproducible demo under pre-agreed scope. No interpretation, prediction, or guarantees. Not investment advice. Any commercial engagement will be conducted via a separately incorporated entity.

Validation CTA (FACT)

Validation can be conducted through a sealed reproducibility demo with agreed scope, inputs, and hash gates.

Article 0 — Constitution of EV424

Accuracy (4) = Truth (2) = Life (4)
